SERIES 404 - Nostril Air Humidifier and Oxygen Supplier

The nostril air humidifier assists the athlete with providing oxygen, stopping bacteria, dust particles, and pollen from entering the lungs, and will neutralize cold air to a cool temperature suitable for the athlete to breathe in the oxygen.

The nostril air humidifier and oxygen supplier also includes a ram air oxygen fan configured to spin clockwise by a wearer's inhaling motion, thereby pushing air through an intake cone air filter to purify the air. Clean air can be delivered through an air intake hose.

When an athlete exhales carbon dioxide, the ram air fan will spin counter-clockwise and push the air out through the air intake opening. This nostril air humidifier and oxygen supplier can ensure that a wearer will have sufficient clean oxygen at all times.
